 Laboratory "screening- & analysis"
 measurement system

New Software Development „WinPCA3“

The expanded "**screening & analysis software**" Win**PCA3** has specially been developed for the demands of the lubricant industry as well as for the tapping tool- and coating-manufacturers

Due to visualisation of torque with the microtap technology the microtap products are also used for screening and evaluation of threading performance in order to optimise process parameters with automatic recording of production process and quality assessment

Options / Features

WinPCA3

WinPCA_VIEW

Level "0" PC-display software. Only cut-, torque- and progress in depth at processing (threads) is diagrammed. Software is available for delivery with „microtap & megatap“ thread tapping units

WinPCA_TAP

Level "1" PC-Software for comparative value observation with allocated storage of definable series of measurements

WinPCA_TTT

Level "2" PC-screening & analysis software for comparative value observation with allocated storage of definable series of measurements plus an analyser for individual analysis with "Dual Cursor" including flexible differentiations of various single- and series of measurement results

[WinPCA TRIAL](#)

Test version This Win**PCA3** is operative for a period of 30 day.

Upgrades / Versions

V2.5 – 2.6V3
 V2.7 – 2.7V6

WinPCA3.36
 3.000 €
 2.500 €

Currently Updates / Versions

V3.0 – V3.34

WinPCA3.36
 1.000 € (12 month update service free of charge)

Instruction & training on-site per day
 Win**PCA3** SW for several PC's

600 €/ Foreign countries plus expenses
 800 € for each PC / work station
